Abstract (en)
[origin: WO2017032934A1] The invention relates mainly to an internal combustion engine (1) comprising: an engine block (2), a post-treatment system (20) installed at the outlet of the engine block (2), and a support (10) for fixing said post-treatment system (20) to the engine block, characterized in that said fixing support (10) is configured to incline said post-treatment system (20) in such a way that a longitudinal axis (X) of said post-treatment system (20) makes a nonzero angle (α) with respect to a longitudinal mid plane (5) of said engine block (2) so as to allow said engine block (2) to be fixed to a chassis via said support (10).
