Abstract (en)
[origin: WO2017032890A1] The invention relates to a control device for a bicycle, comprising at least one device which influences the driving properties of the bicycle. The control device has an electronic controller which is designed to run a first operating system (OS1) and a second operating system (OS2) in parallel. At least one application for controlling and/or monitoring the device which influences the driving properties of the bicycle is ran on the first operating system (OS1) when the control device is operated as intended, and user-specific applications are ran on the second operating system (OS2) when the control device is operated as intended.
