Abstract (en)
[origin: TW201708651A] The present invention provides a rope-form fabric in a treatment device, which processes at least part of movement forms for fabric as providing a nozzle combination (14) during rope-form fabric movement. The combination comprises a conveying nozzle (30) equipped with a nozzle casing (38), where at least two nozzle gaps divide conveyed media. At least one of the two nozzle gaps (62) is provided at a fabric conveying direction (170), and at least a nozzle gap (72) is arranged for the counter fabric conveying direction.
