Abstract (en)
[origin: TW201708681A] A device for positioning two sliding doors (3, 4) in relation to one another, in particular for furniture, comprises a first sliding door (3), which is movable along the first runway, and a second sliding door (4), which is movable along a second runway adjacent to the first runway, wherein a self-retractor is provided on the first sliding door (3), which has a driver (20) movable along a guide path (22), which is pre-tensioned by a force accumulator (19) in one direction and is lockable in a position having tensioned force accumulator (19), wherein the self-retractor can be coupled to a component fixed on the second sliding door (4), to move the first sliding door (3) in relation to the second sliding door (4) into an end position after unlocking of the driver (20).
