Abstract (en)  
[origin: WO2017031601A1] A common rail distributor rail (2) for supplying an internal combustion engine with fuel has an inner pressure pipe, an outer casing (4) and clamps (5) for the connection of high-pressure lines. The clamps (5) are securely connected to the outer casing (4), in particular by thermal joining, and thereby form a double-walled system with pressure-tight sealing of the casing.
