Abstract (en)
[origin: WO2017040246A1] A socket of a fitting assembly adapted for engagement with a fluid conduit has a first end and an oppositely disposed second end. The socket includes an outer surface and an inner surface. The inner surface defines a thru-bore having a central longitudinal axis. The socket includes a plurality of axial protrusions and a plurality of axial grooves. The axial protrusions and the axial grooves being alternately disposed on the inner surface and extending longitudinally along the central longitudinal axis of the socket.
