Abstract (en)
  [origin: WO2016181134A1] We describe a method of displaying information on the wheel of a vehicle, the method comprising: mounting first and second strips of light emitting elements on the wheel such that they lie substantially along first and second radii of the wheel; wherein said light emitting elements are arranged along each said strip and define radial lines of pixels; and wherein radial positions of the light emitting elements of said first strip are interleaved in a radial direction with respect to positions of the light emitting elements of said second strip; and driving said first and second strips of light emitting elements to display an image, wherein said image is represented by radial lines of pixels at successive angular positions; and wherein said driving comprises: driving said first strip of light emitting elements with a first subset of pixels of a first radial line of said image at a first said angular position in the image when said first strip of light emitting elements is at a reference angular position; driving said second strip of light emitting elements with a second subset of pixels of said first radial line of said image at said first angular position in the image when said second strip is at or adjacent said reference angular position, wherein said first and second subsets of pixels comprise interleaved pixels of said first radial line of said image.
