Abstract (en)  
A convertible child seat or support device having a rocker (10) and an adjustable support frame (20). The convertible rocker (10) generally comprises a frame (20) and attached child support assembly (80). The convertible rocker (10) is configured to support an infant in a generally supine position and a toddler in an inclined position. In example embodiments, the frame (20) includes an adjustment mechanism to adjust the angle of incline of the backrest of the child support assembly (80) between an infant position and a toddler position. In other embodiments, the child support assembly (80) is configured to support a child in both an infant and toddler position based on the child's orientation in the child support assembly.
