Abstract (en)

A main nozzle (11) for an air jet loom includes a nozzle body (12), a yarn inlet pipe (13) mounted to the nozzle body (12), a first holder (14), a yarn accelerator pipe (15) supported by the nozzle body (12) through the first holder (14), a brush (16) between the yarn inlet pipe (13) and the first holder (14), and a second holder (17) cooperating with the first holder (14) to hold the brush (16). The first holder (14) is at least partly accommodated in the nozzle body (12). The second holder (17) has on its upstream side a passage forming portion (19) cooperating with the yarn inlet pipe (13) to form a compressed air passage (19a) between an outer peripheral surface (13c) of a distal end (13b) of the yarn inlet pipe (13) and the passage forming portion (19). The first holder (14) and the second holder (17) are individually fixed to the nozzle body (12) to hold the brush (16) between an upstream end (14c) of the first holder (14) and a downstream end (17b) of the second holder (17).
