Abstract (en)  
[origin: EP3343006A1] Disclosed are a method of controlling an engine, which is capable of efficiently controlling the engine during power generation, and an engine generation system using the same. The method of controlling an engine for driving a generator in an engine generation system includes performing engine revolution-per-minute (RPM) tracking control so that the engine is driven at a target engine RPM, driving the engine according to a control cycle of electronic throttle control (ETC) set in a table in accordance with a corresponding engine RPM when a load is in a fixed state, determining a range of variation in the RPM of the engine, adjusting the control cycle of ETC according to the range of variation, and driving the engine according to the adjusted control cycle of ETC.
