Abstract (en)
The present disclosure relates to methods and apparatus for encoding and decoding pixel lists of an image. The pixels of an image are clustered according to at least one relationship. Clusters are stored as pixel lists. An integer matrix of the same size than the image is generated. A pixel of the image at the first index belongs to one list. The next pixel in the list has a second index. An integer is calculated according to the two indices and is stored at the first index in the matrix. The matrix may be compressed according to a lossless compression method. At decoding, a pixel with a first index in the image is associated with a pixel list. A second index is calculated according to the integer at the first index in the matrix and the pixel at the second index in the image is added to the list.
