Abstract (en)

[origin: WO2017036679A1] A finger protection device (S) with a roller blind for a leaf door has a housing (2), a first fastening means (4) and a web (1), wherein the roller blind can be fastened to a door frame (R) and to a door leaf (F) of the leaf door by means of the housing (2) and the first fastening means (4), with the result that, when the device is used as intended, the web (1) covers a gap between the door leaf (F) and the door frame (R). The web (1) has at its free edge an end strip (11) which is held in a second fastening means (3). The second fastening means (3) can be connected to the first fastening means (4) in order to tension the web (1) between the housing (2) and first fastening means (4). The second fastening means (3) is a suspension unit which can be suspended in the first fastening means (4) in order to tension the web (1). The finger protection device according to the invention is of robust design, consists of the simplest means and nevertheless allows optimum protection against manipulation and a maximum degree of readjustability.
