Abstract (en)
[origin: WO2017036913A1] The invention relates to a method for monitoring a water pipeline system (104, 204) of at least one building (105), comprising providing at least one measured water pipeline parameter of the water pipeline system (104, 204), detecting at least one instance of damage to the water pipeline system (104, 204) on the basis of the water pipeline parameter provided, transferring a first alarm indication from a central control device (112) to a first server (116, 316) when an instance of damage to the water pipeline system (104, 204) is detected, transferring a further alarm indication from the first server (116, 316) to a second server (118, 318) after the first alarm indication is received, wherein, after the first alarm indication is received by the first server (116, 316), sending of a first alarm notification to a first communication unit (122) via a first communication channel (117) is initiated, and wherein, after the further alarm indication is received by the second server (118, 318), sending of a further alarm notification to a further communication unit (124) via a further communication channel (115) is initiated.
