Abstract (en)

[origin: EP3346211A1] Provided is a refrigeration cycle apparatus including a refrigerant circuit configured to circulate refrigerant, a heat source unit accommodating a heat source-side heat exchanger of the refrigerant circuit, an indoor unit to be installed indoors and accommodating a load-side heat exchanger of the refrigerant circuit, a refrigerant detection unit configured to receive supply of power from the heat source unit or the indoor unit, and a cap to be mounted to a lever of a power feed switch configured to switch between an on state in which the power is supplied from a main power supply to the heat source unit or the indoor unit and an off state in which the supply of the power from the main power supply to the heat source unit or the indoor unit is interrupted.
