Abstract (en)
[origin: WO2017042477A1] The present invention concerns a piece of furniture and/or household equipment, that is advantageously interactive, comprising: - at least one worktop formed from at least one substrate made from monolithic transparent glass material having a surface area greater than 0.7 m², said substrate being, in particular, mostly or entirely bare or provided with a coating or coatings such that the substrate coated in this way has haze less than 15% and/or light transmission TL greater than 60% and/or an opacity indicator less than 85 - at least one light source, in particular intended to produce one or more areas or one or more elements or displays of the substrate, said source being located, in particular, perpendicular to the substrate for projection display, or under the substrate for display by transmission through the substrate, - at least one interface for communication with at least one element of the worktop such as the light source or sources, and/or if applicable with at least one external element for wireless communication, - and optionally an element inserted into the substrate or worktop, in particular in such a way that the assembly formed by the substrate or worktop and the inserted element has haze greater than 15% and/or light transmission TL less than 60%, and/or an opacity indicator greater than 85, said equipment being further free of heating elements.
