Abstract (en)

[origin: WO2017041779A1] The invention relates to a method and a device for applying fluids, particularly in a method for producing three-dimensional shaped parts, wherein a coating device (5) comprising a blade (1), a fluid outlet and a reservoir (2) is provided, and the blade is displaced across the working field such that it can implement a rotational movement type vibration, said vibration occurring as the result of a stroke by a linear actuator (4).
