Abstract (en)

[origin: WO2017042519A1] The invention concerns a slab frame formed from abutting profile sections (2) each comprising means for engaging at least one stretched fabric, characterised in that each profile section (2) comprises two walls (3, 4) linked to each other by a core (5), said core (5) delimiting, with the walls (3, 4), a groove (6) having an opening (60) on the outer periphery of the frame, each wall (3, 4) being provided, at the ends of same delimiting the opening (60) of the groove (6), with a means for engaging a stretched fabric, and in that at least one of the profile sections (2) comprises light-emitting means (11) attached to the inside of the associated groove (6).
