Abstract (en)

[origin: WO2017042493A1] The invention relates to a particle-trapping device (2) for a turbomachine, said particles being contained in an air stream flowing inside a turbomachine, in particular the air stream flowing in the bypass region (17) of the combustion chamber (13) of said turbomachine. The device is characterised in that it comprises: - at least two particle deflectors (3, 3a, 3b, 3c), - a member (5) for collecting and storing the particles deflected by said deflector, - and means (6) for attaching said trapping device (2) to a part of the turbomachine.
