Abstract (en)

[origin: WO2017042510A1] The invention concerns a hinge (1) for spectacles (100) comprising an optical frame front (101) and at least one temple (102) linked to a tenon (103) of the optical frame front (101), the hinge (1) comprising a first part (2) linked to the tenon (103) and a second part (3) linked to the temple (12), the first part (2) and the second part (3) being linked by a link means (4) mounted along an axis (A) of the hinge and being movable between an open position and a closed position; when passing from the open position to the closed position, an opening (7) is formed between the outer surfaces (6) of the first and second parts (2, 3). According to the invention, the first and second parts (2, 3) each comprise a conduit (8) opening opposite each other in the open position, and the hinge (1) comprises a hinge member (24) mounted along said hinge axis (A) between the first part and the second part (2, 3), said hinge member (24) comprising an outer wall (27) that seals said opening (7) in all of the positions between the open and closed position.
