Abstract (en)

[origin: CN108780547A] Payment devices and the systems and methods for securely managing financial transactions using the payment devices are provided. In one implementation, a portable proxy device comprises a memory configured to store a plurality of credentials. Each of the plurality of credentials pertains to one of a financial credential, an identification credential, or contractual credential. The portable proxy device also includes at least one interface, wherein each of the at least one interface is configured to communicate one of the plurality of credentials to an external device to complete one of a financial function, identification function, or contractual function.
