Abstract (en)

Method for the finishing of a substructure of a wall or a roof, whereby first thermal insulation panels (3) are adjoined against each other on the substructure (2) and then a cladding (23) is applied on a load-bearing frame (22) of slats, panels or the like which are attached on the substructure (2), characterised in that the slats, panels or the like of the load-bearing frame (22) are attached to the substructure (2) by means of one or more accessories (7) in the form of a base plate (8) which is applied against the side of the insulation panels (3) turned away (6) from the substructure (2) and which is fitted with a regulating rod or adjusting screw (9) with a head in the form of an attachment element (18) for the slats, panels or the like, whereby after installation of the accessories (7) the regulating rods or adjustment screws (9), in relation to the base plate (8), can be adjusted to align the slats, panels or the like of the load-bearing frame (2) with each other in a plane
