Abstract (en)
[origin: WO2017048688A1] Methods and systems (10) of accurately dispensing a viscous fluid onto a substrate. In an embodiment, a method includes using an electronic flow meter device (32a, 32b) to produce electrical flow meter output signals and performing a responsive control function in a closed loop manner by adjusting at least one dispensing parameter to correct for a difference between an output data set and a reference data set. In another embodiment, a system (10) includes a control operatively coupled to a gas flow meter device (32a, 32b) and to a weigh scale (72) allowing for a density of an amount of viscous material to be determined.
