Abstract (en)

[origin: WO2017045844A1] The invention relates to a spring device (1) for absorbing transverse forces between a bogie frame and a wagon body on a rail vehicle. The spring device comprises a primary spring unit (2) and a secondary spring unit (3). The spring device (1) has at least one stop element (20) for bridging and in particular for limiting the spring travel of the secondary spring unit (3).
