Abstract (en)
[origin: WO2017045855A1] The invention relates to a handle device (4) for a motor vehicle having a door handle (5), at least one actuating lever (15, 16) which is mounted to be pivotable about a first shaft (14), a support (6) for mounting the door handle (5), at least one drive lever (17, 18) for coupling the door handle (5) to the support (6), wherein the drive lever (17, 18) is mounted to be pivotable about a second shaft (19), a first bearing section (10, 11) arranged on the support (6) for mounting the actuating lever (15, 16), a second bearing section (20, 21) arranged on the support (6) for mounting the second shaft (19), at least one guide element for the forced guidance of the door handle (5) and/or the actuating lever (15, 16), a drive, in particular an electric motor for moving the actuating lever (15, 16) and/or the drive lever (17, 18), and a door lock which is coupled to the door handle (5), wherein the first shaft (14) is displaceably arranged in the first bearing section and the second shaft (19) is arranged to be stationary in the second bearing section in the assembled state.
