Abstract (en)
[origin: WO2017046031A1] The invention relates to a lighting module for a motor vehicle, comprising a light source with semi-conductors comprising electroluminescent rods of submillimetric dimensions, and at least one optical element for shaping the light beams emitted by the light source, the light source comprising at least two zones which are selectively activatable and where the luminance of at least one activatable zone is at least higher than 80 Cd/mm².
