Abstract (en)

[origin: CA2997196A1] The invention relates to a sound transducer assembly for receiving and/or transmitting waterborne sound signals, wherein the sound transducer assembly has a first antenna with a plurality of sound transducers and a first towing cable, and wherein the sound transducer assembly can be pulled in the water by a towboat, and the first antenna and/or the first towing cable have or has a coupling element or a plurality of coupling elements, with the result that the first antenna and/or the first towing cable can be reversibly connected to a second antenna and/or a second towing cable. Furthermore, the invention relates to a towed array sonar, a winch for a towboat, a towboat and a method for deploying and/or retrieving a sound transducer assembly and/or a towed array sonar and for receiving and/or transmitting waterborne sound signals.
