Abstract (en)

[origin: WO2017045769A1] Arrangement for connecting the lines of an electric cable, in particular a three-phase cable, wherein an end region of the respective line is received in a receiving region of a respective cable shoe and in each case one screw is guided through a respective tab region of the respective cable shoe, wherein the respective screw is screw-connected to a respective bush, in particular a sleeve, which is connected to a connection means, in particular which is connected to a connection means in a force-fitting, form-fitting and/or integrally bonded manner, the latter being embodied together in particular as a composite part, wherein a respective depression is formed in the connection means and is either at least partially covered by a respective covering plate on which the respective cable shoe, in particular the receiving region of the respective cable shoe, is placed, in particular wherein the respective depression is delimited by the respective connection means and the respective covering plate, or is at least partially covered by the respective cable shoe, in particular by the receiving region of the respective cable shoe, in particular wherein the respective depression is delimited by the respective connection means and the cable shoe, in particular the receiving region of the cable shoe, wherein a further cable shoe can be received in the depression formed in the connection means.
