Abstract (en)

[origin: WO2017048128A1] The invention relates to a mobile device and method for initiating a video stream, server and method for forwarding a video stream and corresponding system and computer readable storage medium. The mobile device comprising at least one processing component; a memory; a display; an input unit for detecting user input; at least one camera; and a wireless communication unit; wherein the mobile device is switchable between a locked state preventing unauthorized and unintentional usage of the device and an unlocked state, characterized in that the mobile device is configured to switch to a streaming modus upon detection of a predetermined user input by the input unit in the locked state of the mobile device, wherein the device in said streaming modus is configured to establish a communication connection with a remote server using the wireless communication unit, to activate the at least one camera and to stream video from the at least one camera to the remote server.
