Abstract (en)

[origin: WO2017052375A1] A method for coupling an agricultural implement to a tractor, wherein the tractor comprises a first coupling frame and a first coupling member and the agricultural implement comprises a second coupling frame and a second coupling member. The coupling frames are connected to each other for taking along the agricultural implement and the coupling members are connected to each other for driving the agricultural implement. For efficient coupling use is made of a hinging holding jaw which lifts the second coupling member and passes it to the first coupling member. The invention also comprises an assembly of a first coupling member and a second coupling member.
