Abstract (en)
[origin: WO2017051134A1] The invention relates to a beverage container (10) comprising a parison (11) with, inside the said parison, at least one relief (12) on the internal wall of the parison (11), the said relief (12) extending helically from a height on the parison (11) lower than or level with the lip (13), down to a level above or level with the bottom (14) of the parison (11), and being able to accept the beverage along one of its profiles and cause it to slide along its helix, the relief (12) also being inclined in such a way as to form a gutter (22) with the internal surface of the parison (11) over at least part of the length of the helix formed by the relief (12). In this instance, the container (10) concerned has overall symmetry of revolution about a vertical axis Z.
