Abstract (en)  
[origin: WO2017050607A1] The invention relates to an intraocular lens comprising: a primary lens (1000) having a first focal length, a first face and a second face; and a secondary lens (2000) having at least two focal lengths, a first face (2100) and a second face (2200). According to the invention, the second face (2200) of the secondary lens (2000) hugs the first face of the primary lens (1000), and the secondary lens (2000) is attached to the primary lens (1000) by adhesive peel forces over most of the second face (2200).
