Abstract (en)

[origin: WO2017053757A1] Embodiments of the present invention relate to continuous, roll-to-roll methods of manufacturing dry adhesive products. A method for producing a dry adhesive product includes providing a fiber-forming composition to a fiber-forming means; passing a backing material having a first surface and a second surface along a first roller to thereby advance the backing material to the fiber-forming means; allowing the fiber-forming means to form a dry adhesive layer made from the fiber-forming composition on the first surface of the backing material; and passing the backing material having the dry adhesive layer thereon along a second roller.
