Abstract (en)

[origin: WO2017050684A1] A shaft device has an inner shaft portion (1) which is made of a fiber-plastic composite and has an outer shaft portion (2) which is made of a fiber-plastic composite and surrounds the inner shaft portion (1) across an overlap region (Ü). A joint (3) is formed between the inner shaft portion (1) and the outer shaft portion (2) in the overlap region (Ü), a layer made of thermoplastic urethane (TPU) being at least partially provided in the joint (3). As a result of the TPU layer, the damping properties of the shaft device can be set.
