Abstract (en)

[origin: CA2998788A1] The invention relates to a network entity (100) for monitoring a plurality of processes (219) of a communication system, having a receiver (101) for receiving communication data from the plurality of processes (219) of the communication system, a processor (103) that is designed to take the communication data for each process (219) as a basis for registering a process characteristic, and to assign the respective process (219) to a process level (209) of a process hierarchy in accordance with the registered process characteristic, wherein the processor (103) is further designed to check a process status for each process (219) in order to detect a process (219) having a critical process status, and a display (105) that is designed to depict the process levels (209) of the process hierarchy and to graphically highlight the process level (209) to which the process (219) having the critical process status is assigned.
