Abstract (en)

[origin: EP3354579A1] A process for the at least partially sealed wrapping of individual products (P), products (P) of the type preferably chosen from among chocolates, candy, chocolate bars, snacks, chewing gums and the like, which consists of juxtaposing a wrapping sheet (1) against a first face (A) of the product (P); folding the flaps (2, 3) of the sheet (1) onto the product (P) along the faces (B, C) that are contiguous with the first face (A), giving the sheet (1) a C-shape with one base longer than the other; stably coupling the short flap (3) to the inner surface of the long flap (2), thus confining the product (P) within a closed tubular portion, consequently giving the sheet (1) a P-like shape; orienting the protruding flap (2) of the sheet (1) along a direction that is parallel to the first face (A) of the product (P), without juxtaposing the flap (2) on itself; folding the tubular portions (4, 5) that protrude with respect to the two mutually opposite heads (D, E) of the product (P) onto the respective head (D, E), according to the wallet wrapping method, stably coupling them in the closed configuration; folding the free flap (2) of the sheet (1), which comprises respective parts of the tubular portions (4, 5) which are folded and mutually coupled in a stable manner, onto the bottom of the product (P), and coupling it thereto.
