Abstract (en)

[origin: WO2017076795A1] Processing device (10) for processing material to be processed, comprising a stationary housing (20) with a feed opening (22) for feeding material to be processed and comprising a rotor (26) which is arranged in the stationary housing (20) so as to be rotatable about a substantially vertically extending rotor axis, wherein, adjacent to the outer circumference of a base element of the rotor (26), a plurality of bearing pins are fastened to the base element, with a processing element being mounted on each of said bearing pins, and wherein the radially outer ends of the processing elements form a processing gap with an inner circumferential wall of the stationary housing (20), characterized in that the free ends of the bearing pins are connected to one another via a connecting disc.
