Abstract (en)

[origin: WO2017055065A1] The invention relates to a method for straightening a distortion (4) of a component (1) by way of a straightening device (20), the straightening device (20) having a clamping element (21) for clamping in the component (1), a straightening element (23) for introducing a straightening force (11) into the component (1), and an anvil element (26) for supporting the component (1) during the introduction of the straightening force (11). Furthermore, the invention relates to a straightening device (20) for straightening a distortion (4) of a component (1), having a clamping element (21) for clamping in the component (1), a straightening element (23) for introducing a straightening force (11) into the component (1), an anvil element (26) for supporting the component (1) during the introduction of the straightening force (11), and a control element (28) for operating the straightening device (20).
