Abstract (en)  
[origin: WO2017055807A1] A confectionary container (1) comprises a chamber for storing confectionary that is defined by a domed base (2) and a substantially flat upper surface (3). The container has an egress (4) that is openable so as to allow confectionary to be removed from the container and closable so as to prevent confectionary being removed from the container. The egress is either formed between the upper surface and the domed base or is formed on the domed base. Owing to its domed base the container is rotatable so as to allow games to be played with the container.
