Abstract (en)

[origin: WO2017055545A1] The invention relates to a device (10) for filling a container with a carbonated filling product in a beverage filling system. The device comprises a gas valve (20) for supplying a gas into the container, said gas valve (20) being biased by a gas valve spring (22) in a specified switch state, and a filling valve (30) for supplying the filling product into the container, said filling valve (30) being biased by a filling valve spring (31) in a specified switch state. The gas valve (20) and the filling valve (30) are operatively connected to a common actuator (40) for switching between an open and a closed switch state, and the gas valve spring (22) applies a spring force which differs from that of the filling valve spring (31).
