Abstract (en)

[origin: WO2017055735A1] The invention relates to a method for preparing synthetic mineral particles with formula $(Al_yM_{1-y})_2(SixGe_{1-x})_2O_5(OH)_4$, wherein M designates at least one trivalent metal selected from the group made up of gallium and the rare earths, which comprises the following steps: preparing a gel which is a precursor of said synthetic mineral particles by a co-precipitation reaction of at least one salt of a metal selected among aluminium and M with at least one silicon source selected from the group made up of potassium metasilicate, sodium metasilicate, potassium metagermanate and sodium metagermanate, the molar ratio of (Al_yM_{1-y}) to (Si_xGe_{1-x}) during the preparation of said precursor gel being equal to 1, at least one base being added during said co-precipitation reaction; and performing a solvothermal treatment of said precursor gel at a temperature of 250°C to 600°C.
