Abstract (en)

[origin: WO2017055013A1] The aim of the invention is to provide a lubricating device for lubricating machine parts, which has a simple construction and allows efficient lubrication of machine parts. To this end, the lubricating device comprises the following: an aerosol generator for providing an aerosol, comprising a carrier gas and a lubricant; a supply device for supplying the aerosol to a machine interior containing machine parts to be lubricated; a withdrawal device for withdrawing the aerosol from the machine interior; and a control device for controlling the aerosol generator and/or the supply device and/or the withdrawal device so as to be able to modify a pressure in the machine interior.
