Abstract (en)
[origin: WO2018145937A1] The invention relates to a retaining plate (1) for a vacuum-cleaner filter bag, comprising a base plate (2), in which a through-passage opening (3) is formed, and a closure device for closing the through-passage opening (3), wherein the closure device comprises two closure parts (4, 5), which are arranged in a plane parallel to the through-passage opening (3), and wherein the closure parts (4, 5) can be moved in relation to one another in the plane, and this means that a closing movement in the plane can move the closure parts into a closure position, in which they close the through-passage opening (3), each closure part overlapping with part of the through-passage opening (3) in the process.
