Abstract (en)
The invention relates to a non-intrusive rehabilitation device (1) suitable for rehabilitating a patient's joint, the joint connecting a first extremity portion to a second extremity portion. The rehabilitation device (1) comprises first grabbing means (11), adapted to grab the first extremity portion; second grabbing means (12), adapted to grab the second extremity portion; and motion means. The motion means are adapted to move the first (11) and/or second (12) grabbing means to cause both a rotation and a translation relative movements between the first grabbing means (11) and the second grabbing means (12), thus performing a joint extension or flexion and traction.
