Abstract (en)

A garden device comprising a waterfall object to be installed in a garden, as well as a water system for supplying water to the waterfall object, wherein said waterfall object includes a first row of nozzles connected to said water system, wherein said nozzles are arranged such that the water exits in a substantially horizontal direction and wherein said first row of nozzles extends horizontally, such that pressurized water exiting from said row of nozzles form a substantially parabolic downward falling first water curtain, wherein the waterfall object comprises a light source disposed adjacent to and under the first row of nozzles, and wherein the light emitted by the light source can illuminate said first water curtain from behind, and wherein said waterfall object comprises a second row of nozzles, wherein said light source is disposed adjacent to and above the second row of nozzles, and wherein the light emitted by the light source can be reflected by the first water curtain whereby the second water curtain from said second row of nozzles is illuminated from the front.
