Abstract (en)

There is described a filling valve (17) for filling a receptacle (2) with a pourable product, comprising a valve body (18) having an inner flow channel (19) for the pourable product, an outlet mouth (20) arranged at one end of the flow channel (19) and through which the pourable product flows, in use, to fill a respective receptacle (2), a shutter (22) arranged within the flow channel (19) and being adapted to control the flow of the pourable product through the outlet mouth (20); and a swirl-inducing member (23) rotatably arranged inside the flow channel (19) and being adapted to induce a rotational movement of the pourable product flowing through the outlet mouth (20).
