Abstract (en)  
[origin: EP3358061A1] Disclosed herein is an oven (1) for the textile sector, of substantially parallelepiped shape and comprising means (5) for ventilation feeding, symmetrically on both sides, the blowers that ventilate the material with reversible-direction hot air. Said means (5) for ventilation are provided on the ceiling of the oven (1) itself and the side walls, which are doors (7) as well of said oven (1), are adapted to be fully opened. The presence of an air gap, adapted to send and retrieve process air through the material (11), between the outer side doors (6) and the inner side wall (7) of said oven (1), is extremely advantageous.
