Abstract (en)  
The invention relates to a sill assembly, for example for a window or door, said sill assembly comprising a sill and at least one plinth block, characterized in that said sill and said plinth block comprise mutually cooperating connecting means for connecting the at least one plinth block to the sill. The invention further relates to a sill, comprising a basic sill part and a further sill part, for example a stop element or an extension element, wherein said basic sill part and said further sill part comprise mutually cooperating connecting means for connecting the further sill part to the basic sill part, and wherein said basic sill part and said further sill part are made of a solid plastic material.
