Abstract (en)
[origin: EP3358181A1] Apparatus for controlling the position of an eccentric cam (306) of a shaft of a variable-displacement hydraulic motor (300), which comprises: - a control and command unit (200), which is feedback-connected between points for detecting one or more existing operating parameters (320a,320b,320c) of the motor (300) and points for entering set parameters (250a,250b,250c) for the one or more existing operating parameters of the motor and which is designed to control operation of a unit (100) for actuating the eccentric cam (306) connected to the shaft of the motor (300), the actuating unit being inserted in the hydraulic circuit (120) of means (350) for moving said eccentric cam (306), wherein said actuating unit (100) comprises a direct-control electrovalve (110) driven by variable-duration pulses emitted by the control and command unit (200) depending on the difference between an existing value (320,320b320c) detected and a desired stored (262) value (250a,250b,250c) of one of said parameters.
