Abstract (en)  
[origin: WO2017060079A1] The invention relates to a pressure distributor (100) for a motor vehicle, in particular for pneumatic actuators in seats, wherein a pressure generator and a plurality of pneumatic actuators can be connected to the pressure distributor, wherein each actuator is assigned at least one electrically controllable valve (110-n) which forwards a pressure which is generated by the pressure generator in a targeted manner via a respective outlet (111-n) to the actuator which is assigned to it, wherein the plurality of valves (110-n) are supplied with compressed air by the pressure generator during operation of the pressure distributor via a respective inlet (112-n) of a common air inlet line (120). The common air inlet line (120) is connected as a separate component via a releasable connection to the plurality of valves (110-n).
