Abstract (en)
[origin: WO2018108911A1] Packaging system (1), wherein the packaging system (1) comprises a flat bag (7) and a holder (3). The holder (3) is configured to connect objects inside the flat bag (7) to one another. The holder (3) further comprises a grip region (23), which protrudes from the flat bag (7) through an opening (21) in a front side of the flat bag (7). Lateral edges (17) of the flat bag (7) are weakened in such a way that a force acting on the holder (3) and having a sufficiently large component perpendicular to a front surface (9) of the flat bag (7) causes the flat bag (7) to tear along the lateral edges (17) of the flat bag (7).
